Error de registro mío:

DNI es UNIQUE no puede ser igual, por eso reboto registro.

The screenshot shows a mobile application interface for 'EL REY'. At the top, there is a logo and a hamburger menu icon. Below the header, the title 'Register client' is displayed. A red error message states: 'An unexpected server error occurred.' The form contains the following fields: 'Name' (filled with 'JULIO'), 'Last name' (filled with 'MOLINA CABEZAS'), 'N° DNI' (filled with '72313952'), 'Phone number' (filled with '952268912'), 'Email' (filled with 'julioesarmolinacabezas@gmail.com'), and 'Birthdate' (filled with '03/04/1997'). A dark blue button labeled 'Create client' is at the bottom of the form. The footer shows the 'EL REY' logo.

```
CREATE TABLE customers (  
  customer_id SERIAL PRIMARY KEY,  
  first_name VARCHAR(100) NOT NULL,  
  last_name VARCHAR(100) NOT NULL,  
  dni VARCHAR(20) NOT NULL UNIQUE,  
  phone_number VARCHAR(20),  
  email VARCHAR(100) NOT NULL,  
  birth_date DATE,  
  is_active BOOLEAN NOT NULL DEFAULT TRUE,  
  created_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP,  
  updated_at TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP  
);
```

Cambiando el DNI, si tiene éxito.

The screenshot shows the same mobile application interface. The title 'Register client' is displayed. A green success message states: 'Client saved succesfully.' The form fields are now empty: 'Name', 'Last name', 'N° DNI' (with a hint '8 digits'), 'Phone number' (with a hint '9 digits'), 'Email' (filled with 'customer@example.com'), and 'Birthdate' (with a hint 'dd/mm/aaaa'). The 'Create client' button is still present. The footer shows the 'EL REY' logo.
